

(a) Main effect of each factor (table 2)

(b) Single-factor sweep (table 2b)

■ Fiducial-point  $\Delta T$       ■ Decomposition RI (frozen)  
 ■ Decomposition  $\Delta T$  (frozen)      ■ Early amplitude ratio

Source: tables 2 and 2b of 02\_tables.md (descriptive, planned before the run; lab\_log 2026-09-03, results of study 0 and correction of the verdict, and entry 12). Main effect, mean at +1 SD minus mean at -1 SD of the factor, divided by the stratum mean (within age strata, %). In parentheses, within-stratum Spearman  $p$  between the factor and the two decomposition indices (table 2). (b) Subjects with the other five factors at reference; median over age strata.
